

# Social media marketing strategy

A product-led content system to show Milan restaurants and hospitality candidates how Tavoria works.

## STRATEGY

### Build local density, one neighborhood at a time.

Start in one area, such as Certosa, Varesina or Sempione. Publish separate messages for restaurants and candidates.

#### Restaurants

Tavoria helps you fill open shifts: publish the role, print a QR code, receive applications from nearby people and review their 30-second videos.

#### Candidates

Tavoria helps you find nearby hospitality shifts. Create a profile, record a short video and apply without a complicated CV.

## CHANNELS

### Give every channel a clear role.

|                                 |                                          |
|---------------------------------|------------------------------------------|
| <b>TikTok + Instagram Reels</b> | Reach candidates and build awareness.    |
| <b>Instagram Stories</b>        | Share current shifts, polls and replies. |
| <b>Facebook groups</b>          | Reach local candidates and venue owners. |
| <b>LinkedIn + DMs</b>           | Start direct conversations with venues.  |

## CONTENT

### Five repeatable series.

#### 1. The problem

Ask about a real pain: missing staff, last-minute cover or difficulty finding reliable people.

#### 2. The demo

Show the full flow: publish a shift, print the QR and review a candidate.

#### 3. Local jobs

Name the neighborhood, role, hours and next step. Make every post useful to someone nearby.

#### 4. How-to

Explain one action: how to apply, record a video or hire through Tavoria.

#### 5. Proof

Show real app screens, QR codes, venue activity and permission-based testimonials. Never claim results that did not happen.

## PRODUCT-LED CONTENT

### Show the product, not an AI face.

Use real screen recordings, QR codes, cursor highlights, simple animations, captions and optional AI voiceover. The app should do most of the talking.

|                   |                                                                                    |
|-------------------|------------------------------------------------------------------------------------|
| ChatGPT           | Write hooks, scripts, captions, translations and content variations.               |
| CapCut            | Edit videos, add optional AI voiceover, subtitles, music and vertical formatting.  |
| Canva             | Create carousels, Stories, posters and consistent brand graphics.                  |
| Screen recordings | Show the app, QR flow, registration and candidate experience exactly as they work. |
| Motion graphics   | Use arrows, zooms, cursor highlights and simple animation to explain each step.    |

## VIDEO TEMPLATE

### One video, 15-30 seconds.

|    |                                                                   |
|----|-------------------------------------------------------------------|
| 01 | Hook: ask one specific question, such as 'Ti manca un cameriere?' |
| 02 | Show the real app, QR code or application flow.                   |
| 03 | Explain one benefit and one next step.                            |
| 04 | End with one CTA for one audience.                                |

## CADENCE + CONVERSION

### Consistency beats volume.

#### Weekly

Publish 3 candidate videos, 2 restaurant videos and daily Stories. Send 10-20 targeted DMs per day.

#### CTAs

Restaurants: 'LOCALE' or 'demo'. Candidates: 'LAVORO' or 'register'. Use one CTA per post.

#### Conversion loop

Content or DM -> profile visit -> registration -> shift or application -> venue review -> interview -> hire.

#### Measure

Track clicks, QR scans, registrations, completed videos, applications, interviews and hires. Prioritize hires over views.

## RULES

### Keep it trustworthy.

- Do not use AI faces or avatar presenters.
- Show real app screens and real QR codes in product-related videos.
- Use AI voiceover only when it improves clarity; keep it secondary to the product.
- Do not invent testimonials, candidates, venues or hiring results.
- Name the neighborhood and keep the offer specific.
- Optimize for registrations, applications and hires - not views alone.

**Make Tavoria visible where Milan restaurants and hospitality workers already are. Turn attention into registrations, applications and hires.**
